ReNeuvo Group Inc. Selects and Standardize on Century Extrusion Systems

We are excited to announce that ReNeuvo Group Inc. has selected and standardise on Century Extrusion Systems

ReNeuvo Group Inc. and Associated companies has been in the business for several years and will be sharing new, exciting developments within the TPE industry.

The increase demand in the automotive manufacturing industry has created an opportunity for ReNeuvo to drive sustainability in an impactful, meaningful way. Our core value is aimed at carbon emission reduction by incorporating recycled tire reprocessed rubber crumb and reprocessed post-industrial and post-consumer recycled plastics as a substitute for TPE made from virgin materials in automotive components. TPE usage in automotive applications has increased exponentially as a result of high usage of parts made from plastic.

We are part of CPM, a leading industrial equipment and systems company. CPM Extrusion Group has three business units worldwide.

Our core competency is the development of complete compounding systems, twin screw extruders, our Ring Extruder RE (twelve screw extruder) , spare parts for co-rotating extruders, self-cleaning intermeshing twin screw extruders and service.

Our engineered approach to reliable system design improves life for the processing professional who wants increased capacity, lower downtime, and improved finished product quality.

We are up to the challenge of outfitting your changing industry with high-efficiency, cost-effective systems that will deliver for generations to come

We develop and deliver innovative key-turn extrusion systems by focusing on customers specific requirements.

Our experience with highly customized machinery and complete systems for high complex processes offers the perfect basis for a successful project execution from the first sketches to the launch. With our CPM team you experience technical affinity, constant eager for further development, agility and passion.
