

FOR IMMEDIATE RELEASE

Toronto, September 13, 2022

ReNeuvo Group Inc.: For the first time, ReNeuvo Group has been invited to attend and present at the Thermoplastic Elastomers World Summit

We are excited to announce that ReNeuvo Group Inc. has been invited to attend the Thermoplastic Elastomers (TPE) World Summit in Dusseldorf, Germany on November 30th. Jose M. Gonzalez, President & CEO has received the honour to present and represent ReNeuvo's Group Inc.

ReNeuvo's Group of companies has been in the business for several years and Jose will be sharing new, exciting developments within the automotive and TPE industry.

The increase demand in the automotive manufacturing industry has created an opportunity for ReNeuvo to drive sustainability in an impactful, meaningful way. Our core value is aimed at carbon emission reduction by incorporating recycled tire reprocessed rubber crumb and reprocessed post-industrial and post-consumer recycled plastics as a substitute for TPE made from virgin materials in automotive components. TPE usage in automotive applications has increased exponentially as a result of high usage of parts made from plastic.

"I am elated to be invited and to sit alongside key industry players and global experts. I look forward to sharing new insights and learning from senior level, innovative, forward thinking industry professionals." – Jose

Please stay tuned for the 2022 conference discoveries in the following topics:

- The road to a sustainable and circular value chain
- TPE market review and outlook
- From waste to resource: TPEs from recycled materials
- Automotive industry: Today, tomorrow and the future
- Regulatory update and new TPE standards
- Advancements in green and bio-based materials
- TPE in the medical and healthcare sector
- Innovative materials and applications
- Evolution of TPE manufacturing processes
